## **DEDICATION**

*To teachers, who make it possible to disseminate knowledge  
to enlighten the young and curious minds  
of our future generations*

*To students, who are dedicated to learning new technologies  
and making the world a better place to live in*

## **THANKS**

*To the faculty and students of the MET department of  
Purdue University Northwest for their cooperation*

*To employees of CADCIM Technologies for their valuable help*

*To Rajendra Badola for copy editing the manuscript*

## Online Training Program Offered by CADCIM Technologies

---

CADCIM Technologies provides effective and affordable virtual online training on various software packages including Computer Aided Design, Manufacturing and Engineering (CAD/CAM/CAE), computer programming languages, animation, architecture, and GIS. The training is delivered 'live' via Internet at any time, any place, and at any pace to individuals as well as the students of colleges, universities, and CAD/CAM/CAE training centers. The main features of this program are:

### Training for Students and Companies in a Classroom Setting

Highly experienced instructors and qualified engineers at CADCIM Technologies conduct the classes under the guidance of Prof. Sham Tickoo of Purdue University Northwest, USA. This team has authored several textbooks that are rated "one of the best" in their categories and are used in various colleges, universities, and training centers in North America, Europe, and in other parts of the world.

### Training for Individuals

CADCIM Technologies with its cost effective and time saving initiative strives to deliver the training in the comfort of your home or work place, thereby relieving you from the hassles of traveling to training centers.

### Training Offered on Software Packages

CADCIM provides basic and advanced training on the following software packages:

**CAD/CAM/CAE:** CATIA, PTC Creo Parametric, SOLIDWORKS, Autodesk Inventor, Solid Edge, NX, AutoCAD, AutoCAD LT, AutoCAD Plant 3D, Customizing AutoCAD, and ANSYS

**Architecture and GIS:** Autodesk Revit (Architecture/Structure/MEP), AutoCAD Civil 3D, AutoCAD Map 3D, Navisworks, Primavera, and Bentley STAAD Pro

**Animation and VFX:** Adobe Photoshop, Adobe Illustrator, Adobe InDesign, Adobe Premiere, Adobe After Effects, Autodesk 3ds Max, Autodesk 3ds Max Design, Autodesk Maya, The Foundry NukeX, MAXON ZBrush, and MAXON CINEMA 4D

**Computer Programming:** C++, VB.NET, Oracle, AJAX, and Java

For more information, please visit the following link: <https://www.cadcim.com>

### Note

If you are a faculty member, you can register by clicking on the following link to access the teaching resources: <https://www.cadcim.com/Registration.aspx>. The student resources are available at <https://www.cadcim.com>. We also provide **Live Virtual Online Training** on various software packages. For more information, write us at [sales@cadcim.com](mailto:sales@cadcim.com).

|-------------------|------|
| <b>Dedication</b> | iii  |
| <b>Preface</b>    | xvii |

## Chapter 1: Adding Constraints to Sketches

|                                                                     |      |
|---------------------------------------------------------------------|------|
| Introduction                                                        | 1-2  |
| Adding Geometric Constraints                                        | 1-2  |
| Applying the Horizontal Constraint                                  | 1-3  |
| Applying the Vertical Constraint                                    | 1-3  |
| Applying the Coincident Constraint                                  | 1-4  |
| Applying the Fix Constraint                                         | 1-5  |
| Applying the Perpendicular Constraint                               | 1-5  |
| Applying the Parallel Constraint                                    | 1-5  |
| Applying the Collinear Constraint                                   | 1-6  |
| Applying the Concentric Constraint                                  | 1-6  |
| Applying the Tangent Constraint                                     | 1-7  |
| Applying the Symmetric Constraint                                   | 1-7  |
| Applying the Equal Constraint                                       | 1-8  |
| Applying the Smooth Constraint                                      | 1-8  |
| Controlling the Display of Constraints                              | 1-8  |
| Applying Constraints Automatically                                  | 1-13 |
| Applying Dimensional Constraints                                    | 1-15 |
| Converting a Dimensional Constraint into an Annotational Constraint | 1-16 |
| Concept of a Fully-Defined Sketch                                   | 1-16 |
| Under-defined                                                       | 1-17 |
| Fully-defined                                                       | 1-17 |
| Over-defined                                                        | 1-17 |
| Controlling the Display of the Dimensional Constraint               | 1-18 |
| Working with Equations                                              | 1-23 |
| Adding Equations while Applying Dimensional Constraints             | 1-23 |
| Adding Equations Using the Parameters Manager                       | 1-24 |
| Self-Evaluation Test                                                | 1-28 |
| Review Questions                                                    | 1-29 |

## Chapter 2: Understanding External References

|                                           |      |
|-------------------------------------------|------|
| External References                       | 2-2  |
| Dependent Symbols                         | 2-2  |
| Managing External References in a Drawing | 2-4  |
| Attaching an Xref Drawing (Attach Option) | 2-6  |
| Detaching an Xref Drawing (Detach Option) | 2-10 |

|                                                       |      |
|-------------------------------------------------------|------|
| Updating an Xref Drawing (Reload Option)              | 2-11 |
| Unloading an Xref Drawing (Unload Option)             | 2-11 |
| Adding an Xref Drawing (Bind Option)                  | 2-11 |
| The Overlay Option                                    | 2-13 |
| Attaching Files to a Drawing                          | 2-18 |
| Working with Underlays                                | 2-18 |
| Editing an Underlay                                   | 2-19 |
| Opening an Xreffed Object in a Separate Window        | 2-21 |
| Using the DesignCenter to Attach a Drawing as an Xref | 2-21 |
| Adding Xref Dependent Named Objects                   | 2-22 |
| Clipping External References                          | 2-24 |
| Displaying Clipping Frame                             | 2-26 |
| Demand Loading                                        | 2-27 |
| Editing References In-Place                           | 2-28 |
| Self-Evaluation Test                                  | 2-30 |
| Review Questions                                      | 2-30 |

### Chapter 3: Working with Advanced Drawing Options

|                                           |      |
|-------------------------------------------|------|
| Understanding the Use of Multilines       | 3-2  |
| Defining a Multiline Style                | 3-2  |
| Drawing Multilines                        | 3-7  |
| Editing Multilines by Using Grips         | 3-8  |
| Editing Multilines by Using Dialog Box    | 3-9  |
| Cross Intersection (CC/OC/MC)             | 3-10 |
| Tee Intersection (CT/OT/MT)               | 3-11 |
| Corner Joint (CJ)                         | 3-11 |
| Adding and Deleting Vertices (AV/DV)      | 3-12 |
| Cutting and Welding Multilines (CS/CA/WA) | 3-12 |
| Creating Revision Clouds                  | 3-15 |
| Rectangular Revision Cloud                | 3-16 |
| Polygonal Revision Cloud                  | 3-16 |
| Freehand Revision Cloud                   | 3-16 |
| Creating Wipeouts                         | 3-17 |
| Creating NURBS                            | 3-18 |
| Editing Splines                           | 3-21 |
| Editing Splines using 3D Edit Bar         | 3-25 |
| Markup Import and Markup Assist Features  | 3-26 |
| DWG Compare                               | 3-35 |
| Self-Evaluation Test                      | 3-39 |
| Review Questions                          | 3-40 |

### Chapter 4: Grouping and Advanced Editing of Sketched Objects

|                                                                |     |
|----------------------------------------------------------------|-----|
| Grouping Sketched Objects Using the Object Grouping Dialog Box | 4-2 |
| Grouping Sketched Objects Using the Group Button               | 4-7 |
| Selecting Groups                                               | 4-7 |
| Changing Properties of an Object                               | 4-8 |

|                                                      |      |
|------------------------------------------------------|------|
| Exploding Compound Objects                           | 4-14 |
| Editing Polylines                                    | 4-15 |
| Editing Single Polyline                              | 4-16 |
| Editing Multiple Polylines                           | 4-30 |
| Undoing Previous Commands                            | 4-32 |
| Reversing the Undo Operation                         | 4-36 |
| Renaming Named Objects                               | 4-37 |
| Removing Unused Named Objects                        | 4-38 |
| Purgeable items Tab                                  | 4-38 |
| Find non-Purgeable items Tab                         | 4-39 |
| Setting Selection Modes Using the Options Dialog Box | 4-40 |
| Self-Evaluation Test                                 | 4-44 |
| Review Questions                                     | 4-44 |

## **Chapter 5: Working with Data Exchange & Object Linking and Embedding**

|                                                       |      |
|-------------------------------------------------------|------|
| Understanding the Concept of Data Exchange in AutoCAD | 5-2  |
| Creating Data Interchange (DXF) Files                 | 5-2  |
| Creating a Data Interchange File                      | 5-2  |
| Information in a DXF File                             | 5-3  |
| Converting DXF Files into Drawing Files               | 5-3  |
| Importing CAD Files                                   | 5-4  |
| Other Data Exchange Formats                           | 5-4  |
| DXB File Format                                       | 5-4  |
| Creating and Using an ACIS File                       | 5-5  |
| Importing PDF Files                                   | 5-5  |
| Importing 3D Studio Files                             | 5-7  |
| Creating and Using a Windows Metafile                 | 5-8  |
| Creating and Using a V8 DGN File                      | 5-8  |
| Creating a BMP File                                   | 5-8  |
| Raster Images                                         | 5-9  |
| Attaching Raster Images                               | 5-9  |
| Managing Raster Images                                | 5-11 |
| Editing Raster Image Files                            | 5-13 |
| Clipping Raster Images                                | 5-13 |
| Adjusting Raster Images                               | 5-15 |
| Modifying the Image Quality                           | 5-15 |
| Modifying the Transparency of an Image                | 5-16 |
| Controlling the Display of Image Frames               | 5-16 |
| Changing the Display Order                            | 5-17 |
| Other Editing Operations                              | 5-18 |
| Scaling Raster Images                                 | 5-18 |
| DWG Convert                                           | 5-18 |
| Conversion Setup Options                              | 5-19 |
| Working with PostScript Files                         | 5-22 |
| Object Linking and Embedding (OLE)                    | 5-25 |
| Sharing Drawing                                       | 5-33 |

|                      |      |
|----------------------|------|
| Self-Evaluation Test | 5-35 |
| Review Questions     | 5-35 |

## Chapter 6: The User Coordinate System

|                                            |      |
|--------------------------------------------|------|
| The User Coordinate System (UCS)           | 6-2  |
| Controlling the Visibility of the UCS Icon | 6-3  |
| Defining the New UCS                       | 6-5  |
| Managing the UCS through the Dialog Box    | 6-21 |
| System Variables                           | 6-25 |
| Self-Evaluation Test                       | 6-25 |
| Review Questions                           | 6-26 |

## Chapter 7: Getting Started with 3D

|                                                               |      |
|---------------------------------------------------------------|------|
| Starting Three Dimensional (3D) Modeling in AutoCAD           | 7-2  |
| Use of Three-dimensional Drawing                              | 7-2  |
| Types of 3D Models                                            | 7-3  |
| Wireframe Models                                              | 7-3  |
| Surface Models                                                | 7-4  |
| Solid Models                                                  | 7-4  |
| Conventions Followed in AutoCAD                               | 7-5  |
| Changing the Viewpoint to View 3D Models                      | 7-6  |
| Changing the Viewpoint Using the ViewCube                     | 7-7  |
| Changing the Viewpoint Using the Ribbon or the Toolbar        | 7-8  |
| Changing the Viewpoint Using the Viewpoint Presets Dialog Box | 7-10 |
| Changing the Viewpoint Using the -VPOINT Command              | 7-12 |
| In-Canvas Viewport Control                                    | 7-15 |
| 3D Coordinate Systems                                         | 7-17 |
| Direct Distance Entry Method                                  | 7-21 |
| Trim, Extend, and Fillet Tools                                | 7-24 |
| Setting Thickness and Elevation for New Objects               | 7-24 |
| The ELEV Command                                              | 7-24 |
| Suppressing the Hidden Edges                                  | 7-26 |
| Creating a 3D Polyline                                        | 7-27 |
| Converting Wireframe Models into Surface Models               | 7-27 |
| Creating 3D Faces                                             | 7-27 |
| Creating Polyface Meshes                                      | 7-28 |
| Controlling the Visibility of the 3D Face Edges               | 7-30 |
| Creating Planar Surfaces                                      | 7-30 |
| The 3DMESH Command                                            | 7-31 |
| Editing the Surface Mesh                                      | 7-31 |
| The Edit Polyline Tool                                        | 7-31 |
| Dynamic Viewing of 3D Objects                                 | 7-34 |
| Using the SteeringWheels                                      | 7-34 |
| Dynamically Rotating the View of a Model                      | 7-37 |
| Clipping the View of a Model Dynamically                      | 7-45 |

|                      |      |
|----------------------|------|
| Nudge Functionality  | 7-46 |
| Self-Evaluation Test | 7-47 |
| Review Questions     | 7-48 |

## Chapter 8: Creating Solid Models

|                                                              |      |
|--------------------------------------------------------------|------|
| What is Solid Modeling?                                      | 8-2  |
| Creating Predefined Solid Primitives                         | 8-2  |
| Creating a Solid Box                                         | 8-3  |
| Creating a Solid Cone                                        | 8-5  |
| Creating a Solid Cylinder                                    | 8-8  |
| Creating a Solid Sphere                                      | 8-9  |
| Creating a Solid Torus                                       | 8-9  |
| Creating a Solid Wedge                                       | 8-10 |
| Creating a Pyramid                                           | 8-11 |
| Creating a Polysolid                                         | 8-12 |
| Creating a Helix                                             | 8-15 |
| Modifying the Visual Styles of Solids                        | 8-17 |
| Creating Complex Solid Models                                | 8-27 |
| Creating Regions                                             | 8-27 |
| Creating Complex Solid Models by Applying Boolean Operations | 8-27 |
| Combining Solid Models                                       | 8-27 |
| Subtracting One Solid From the Other                         | 8-28 |
| Intersecting Solid Models                                    | 8-28 |
| Checking Interference in Solids                              | 8-29 |
| Dynamic UCS                                                  | 8-35 |
| Defining the New UCS Using the ViewCube and the Ribbon       | 8-36 |
| Creating Extruded Solids                                     | 8-36 |
| Extruding along the Normal                                   | 8-37 |
| Extruding with a Taper Angle                                 | 8-37 |
| Extruding along a Direction                                  | 8-37 |
| Extruding along a Path                                       | 8-38 |
| Extruding using Expressions                                  | 8-38 |
| Creating Revolved Solids                                     | 8-39 |
| Creating Swept Solids                                        | 8-40 |
| Creating Lofted Solids                                       | 8-44 |
| Creating Presspull Solids                                    | 8-55 |
| Self-Evaluation Test                                         | 8-65 |
| Review Questions                                             | 8-65 |

## Chapter 9: Editing 3D Objects-I

|                                     |     |
|-------------------------------------|-----|
| Filleting Solid Models              | 9-2 |
| Chamfering Solid Models             | 9-3 |
| Rotating Solid Models in 3D Space   | 9-4 |
| Rotating Solid Models about an Axis | 9-7 |
| Mirroring Solid Models in 3D Space  | 9-8 |

|                                                |      |
|------------------------------------------------|------|
| Moving Models in 3D Space                      | 9-14 |
| Creating Arrays in 3D Space                    | 9-14 |
| Aligning Solid Models                          | 9-16 |
| Aligning Solids by Defining an Alignment Plane | 9-19 |
| Extracting Edges of a Solid Model              | 9-20 |
| Converting Objects to Surfaces                 | 9-21 |
| Converting Objects to Solids                   | 9-22 |
| Converting Surfaces to Solids                  | 9-22 |
| Point Cloud                                    | 9-23 |
| Attaching the Point Cloud                      | 9-23 |
| Slicing Solid Models                           | 9-25 |
| Creating the Cross-Sections of Solids          | 9-28 |
| Self-Evaluation Test                           | 9-33 |
| Review Questions                               | 9-34 |

## **Chapter 10: Editing 3D Objects-II**

|                                                          |       |
|----------------------------------------------------------|-------|
| Editing Solid Models                                     | 10-2  |
| Editing Faces of a Solid Model                           | 10-2  |
| Editing Edges of a Solid Model                           | 10-7  |
| Editing Entire Body of a Solid Model                     | 10-10 |
| Generating a Section by Defining a Section Plane         | 10-13 |
| Solid History                                            | 10-19 |
| Generating Drawing Views of a Solid Model                | 10-20 |
| Solid View                                               | 10-21 |
| Solid Drawing                                            | 10-23 |
| Solid Profile                                            | 10-24 |
| Drawing Views                                            | 10-24 |
| Base                                                     | 10-24 |
| Projected View                                           | 10-26 |
| Edit View                                                | 10-27 |
| Update View                                              | 10-27 |
| Auto Update                                              | 10-27 |
| Drafting Standard                                        | 10-28 |
| Generating Section Views                                 | 10-28 |
| Creating Flatshot                                        | 10-33 |
| Calculating the Mass Properties of Solid Models          | 10-36 |
| Recording the Drawing Steps by Using the Action Recorder | 10-38 |
| Using ShowMotion for Presentation                        | 10-40 |
| Playing the Animation                                    | 10-41 |
| Self-Evaluation Test                                     | 10-42 |
| Review Questions                                         | 10-43 |

## **Chapter 11: Surface Modeling**

|                             |      |
|-----------------------------|------|
| Surface Modeling            | 11-2 |
| Creating Wireframe Elements | 11-2 |

|                                       |       |
|---------------------------------------|-------|
| Spline CV                             | 11-2  |
| Spline Fit                            | 11-3  |
| Spline Freehand                       | 11-3  |
| Extract Isoline Curves                | 11-4  |
| Creating Surfaces by Using Profiles   | 11-4  |
| Creating an Extruded Surface          | 11-4  |
| Creating a Revolved Surface           | 11-6  |
| Creating a Loft Surface               | 11-7  |
| Creating a Sweep Surface              | 11-7  |
| Creating a Planar Surface             | 11-7  |
| Creating a Network Surface            | 11-8  |
| Creating Surfaces from other Surfaces | 11-8  |
| Creating a Blend Surface              | 11-9  |
| Creating a Patch Surface              | 11-10 |
| Creating an Offset Surface            | 11-12 |
| Editing Surfaces                      | 11-13 |
| Creating Fillets                      | 11-13 |
| Trimming Surfaces                     | 11-14 |
| Untrimming Surfaces                   | 11-16 |
| Extending Surfaces                    | 11-17 |
| Sculpting Surfaces                    | 11-18 |
| Extracting Intersections              | 11-18 |
| NURBS Surfaces                        | 11-30 |
| Projecting Geometries                 | 11-34 |
| Performing Surface Analysis           | 11-43 |
| Zebra                                 | 11-44 |
| Analysis Curvature                    | 11-45 |
| Analysis Draft                        | 11-46 |
| Self-Evaluation Test                  | 11-47 |
| Review Questions                      | 11-47 |

## Chapter 12: Mesh Modeling

|                                   |       |
|-----------------------------------|-------|
| Introduction                      | 12-2  |
| Creating Mesh Primitives          | 12-2  |
| Creating a Mesh Box               | 12-2  |
| Creating Surface Meshes           | 12-5  |
| Creating Revolved Surface Meshes  | 12-5  |
| Creating Edge Surface Meshes      | 12-7  |
| Creating Ruled Surface Meshes     | 12-8  |
| Creating Tabulated Surface Meshes | 12-9  |
| Modifying Mesh Objects            | 12-11 |
| Adding Smoothness to Meshes       | 12-11 |
| Refining the Meshes               | 12-14 |
| Adding Crease to Meshes           | 12-16 |
| Editing Mesh Faces                | 12-17 |
| Splitting the Mesh Faces          | 12-17 |
| Extruding the Mesh Faces          | 12-18 |

|                                        |       |
|----------------------------------------|-------|
| Merging the Mesh Faces                 | 12-19 |
| Closing the Gaps                       | 12-19 |
| Collapsing the Mesh Vertices           | 12-20 |
| Spinning the Edges of Triangular Faces | 12-21 |
| Converting Mesh Objects                | 12-27 |
| Converting Mesh Objects into Solids    | 12-27 |
| Converting Mesh Objects into Surfaces  | 12-29 |
| Working with Gizmos                    | 12-31 |
| Move Gizmo                             | 12-31 |
| Rotate Gizmo                           | 12-32 |
| Scale Gizmo                            | 12-32 |
| Self-Evaluation Test                   | 12-42 |
| Review Questions                       | 12-43 |

### Chapter 13: Rendering and Animating Designs

|                                                                                      |       |
|--------------------------------------------------------------------------------------|-------|
| Understanding the Concept of Rendering                                               | 13-2  |
| Assigning Materials                                                                  | 13-2  |
| Materials Browser                                                                    | 13-3  |
| Assigning Selected Materials to Objects                                              | 13-5  |
| Attaching Material by Layers                                                         | 13-6  |
| Creating and Editing Materials                                                       | 13-6  |
| Basic Rendering                                                                      | 13-9  |
| Creating New Materials                                                               | 13-10 |
| Mapping Materials on Objects                                                         | 13-16 |
| Converting Materials Created in Previous AutoCAD Release into<br>AutoCAD 2027 Format | 13-20 |
| Adding Lights to the Design                                                          | 13-21 |
| Default Light                                                                        | 13-21 |
| Point Light                                                                          | 13-23 |
| Spotlight                                                                            | 13-32 |
| Distant Light                                                                        | 13-33 |
| Web Light                                                                            | 13-34 |
| Sun Light                                                                            | 13-35 |
| Converting Lights Created in AutoCAD's Previous Release into<br>AutoCAD 2027 Format  | 13-43 |
| Modifying Lights                                                                     | 13-43 |
| Understanding Rendering Presets                                                      | 13-44 |
| Controlling the Rendering Environment                                                | 13-47 |
| Rendering with a Background                                                          | 13-47 |
| Adjusting the Lighting Exposure to Rendered Image                                    | 13-48 |
| Rendering a Model with Different Render Settings                                     | 13-48 |
| Obtaining Rendering Information                                                      | 13-51 |
| Saving a Rendered Image                                                              | 13-51 |
| Saving the Rendered Image to a File                                                  | 13-51 |
| Saving the Viewport Rendering                                                        | 13-52 |
| Saving the Rendered Image from the Render Window                                     | 13-52 |
| Plotting Rendered Images                                                             | 13-53 |

|                                                                |       |
|----------------------------------------------------------------|-------|
| Unloading AutoCAD Render                                       | 13-53 |
| Working with Cameras                                           | 13-53 |
| Create Camera                                                  | 13-53 |
| Editing the Cameras                                            | 13-56 |
| Creating Animations                                            | 13-57 |
| Creating Animation of 3D Navigations                           | 13-57 |
| Creating Animation by Defining the Path of the Camera Movement | 13-58 |
| Self-Evaluation Test                                           | 13-64 |
| Review Questions                                               | 13-64 |

## Chapter 14: Hyperlinks and 3D Printing

|                                  |       |
|----------------------------------|-------|
| Introduction                     | 14-2  |
| BROWSER                          | 14-2  |
| HYPERLINK                        | 14-2  |
| HYPERLINKFWD                     | 14-2  |
| HYPERLINKBACK                    | 14-2  |
| HYPERLINKSTOP                    | 14-2  |
| PASTEASHYPERLINK                 | 14-2  |
| HYPERLINKBASE                    | 14-2  |
| Internet Commands                | 14-2  |
| Understanding URLs               | 14-3  |
| Launching a Web Browser          | 14-4  |
| Changing the Default Website     | 14-5  |
| Using Hyperlinks with AutoCAD    | 14-5  |
| Pasting as Hyperlink             | 14-12 |
| Editing Hyperlinks               | 14-12 |
| Removing Hyperlinks from Objects | 14-12 |
| The Drawing Web Format           | 14-12 |
| Creating a DWF File              | 14-13 |
| 3D Printing                      | 14-22 |
| Self-Evaluation Test             | 14-26 |
| Review Questions                 | 14-27 |

## Chapter 15: Script Files and Slide Shows

|                                             |       |
|---------------------------------------------|-------|
| What Are Script Files?                      | 15-2  |
| Running Script Files                        | 15-4  |
| Repeating Script Files                      | 15-10 |
| Introducing Time Delay in Script Files      | 15-11 |
| Resuming Script Files                       | 15-12 |
| Command Line Switches                       | 15-12 |
| Running a Script File while Loading AutoCAD | 15-12 |
| What is a Slide Show?                       | 15-22 |
| What are Slides?                            | 15-22 |
| Creating Slides                             | 15-23 |
| Viewing Slides                              | 15-24 |
| Preloading Slides                           | 15-26 |

|                      |       |
|----------------------|-------|
| Slide Libraries      | 15-28 |
| Self-Evaluation Test | 15-32 |
| Review Questions     | 15-33 |

## Chapter 16: Creating Linetypes and Hatch Patterns

|                                           |       |
|-------------------------------------------|-------|
| Standard Linetypes                        | 16-2  |
| Linetype Definitions                      | 16-2  |
| Elements of Linetype Specification        | 16-3  |
| Creating Linetypes                        | 16-3  |
| Alignment Specification                   | 16-9  |
| LTSCALE Command                           | 16-10 |
| LTSCALE Factor for Plotting               | 16-12 |
| Current Linetype Scaling (CELTSCALE)      | 16-13 |
| Alternate Linetypes                       | 16-14 |
| Modifying Linetypes                       | 16-15 |
| Complex Linetypes                         | 16-18 |
| Creating a String Complex Linetype        | 16-18 |
| Hatch Pattern Definition                  | 16-27 |
| How Hatch Works?                          | 16-30 |
| Simple Hatch Pattern                      | 16-30 |
| Effect of Angle and Scale Factor on Hatch | 16-32 |
| Hatch Pattern with Dashes and Dots        | 16-33 |
| Hatch with Multiple Descriptors           | 16-35 |
| Saving Hatch Patterns in a Separate File  | 16-40 |
| Custom Hatch Pattern File                 | 16-40 |
| Self-Evaluation Test                      | 16-42 |
| Review Questions                          | 16-43 |

## Chapter 17: Customizing the acad.pgp File

|                                  |       |
|----------------------------------|-------|
| What is the acad.pgp File?       | 17-2  |
| Sections of the acad.pgp File    | 17-9  |
| Reinitializing the acad.pgp File | 17-10 |
| Self-Evaluation Test             | 17-13 |
| Review Questions                 | 17-13 |

## Chapter 18: Conventional Dimensioning and Projection Theory Using AutoCAD

|                               |       |
|-------------------------------|-------|
| Dimensioning                  | 18-2  |
| Dimension Units               | 18-2  |
| Dimensioning Components       | 18-4  |
| Common Rules for Dimensioning | 18-5  |
| Working Drawings              | 18-15 |
| Detail Drawing                | 18-15 |
| Assembly Drawing              | 18-16 |

|                                    |       |
|------------------------------------|-------|
| Bill of Materials                  | 18-17 |
| Multiview Drawings                 | 18-18 |
| Understanding the X, Y, and Z Axes | 18-19 |
| Orthographic Projections           | 18-19 |
| Positioning Orthographic Views     | 18-23 |
| Sectional Views                    | 18-23 |
| Full Section                       | 18-29 |
| Half Section                       | 18-30 |
| Broken Section                     | 18-31 |
| Revolved Section                   | 18-31 |
| Removed Section                    | 18-32 |
| Offset Section                     | 18-32 |
| Aligned Section                    | 18-34 |
| Cutting Plane Lines                | 18-34 |
| Spacing for Hatch Lines            | 18-35 |
| Direction of Hatch Lines           | 18-37 |
| Points to Remember                 | 18-37 |
| Auxiliary Views                    | 18-38 |
| Self-Evaluation Test               | 18-47 |
| Review Questions                   | 18-48 |

## PROJECTS AVAILABLE FOR FREE DOWNLOAD

In this textbook two projects have been given for free download. You can download these chapters from our website [www.cadcim.com](http://www.cadcim.com). To download these chapters, follow the given path: *Textbooks > CAD/CAM/CAE > AutoCAD Advanced > Advanced AutoCAD 2027 with Videos: A Problem-Solving Approach, 3D and Advanced > Projects for Free Download* and then click on the required file.

# Preface

---

## **AutoCAD 2027**

AutoCAD, developed by Autodesk Inc., is the most popular PC-CAD system available in the market. Today, over 7 million people use AutoCAD and other AutoCAD-based design products. 100% of the Fortune 100 firms and 98% of the Fortune 500 firms are Autodesk customers. AutoCAD's open architecture allows third-party developers to write application software that has significantly added to its popularity. For example, the author of this book has developed a software package “**SMLayout**” for sheet metal products that generates a flat layout of various geometrical shapes such as transitions, intersections, cones, elbows, tank heads, and so on. Several companies in Canada and United States are using this software package with AutoCAD to design and manufacture various products. AutoCAD also facilitates customization that enables the users to increase their efficiency and improve their productivity.

The **Advanced AutoCAD 2027 with Videos: A Problem-Solving Approach, 3D and Advanced** textbook contains detailed explanation of AutoCAD commands and their applications to solve design problems. Every AutoCAD command is thoroughly explained with the help of examples and illustrations. This makes it easy for the users to understand the functions and applications of the tools and commands.

After reading this textbook, you will be able to create 3D objects, apply materials to objects, generate drafting views of a model, create surface or mesh objects, and render and animate designs.

The book covers designing concepts in detail as well as provides elaborative description of technical drawing in AutoCAD including orthographic projections, dimensioning principles, sectioning, auxiliary views, and assembly drawings. While going through this textbook, you will discover some new unique applications of AutoCAD that will have a significant effect on your drawings and designs. In addition, you will be able to understand why AutoCAD has become such a popular software package and an international standard in PC-CAD.

## Symbols Used in the Textbook

### Note

The author has provided additional information to the users about the topic being discussed in the form of notes.

### Tip

Special information and techniques are provided in the form of tips that will increase the efficiency of the users.

### New

This symbol indicates that the command or tool being discussed is new.

### Enhanced

This symbol indicates that the command or tool being discussed has been enhanced in AutoCAD 2027.

## Formatting Conventions Used in the Textbook

Refer to the following list for the formatting conventions used in this textbook.

- Command names are capitalized and written in boldface letters. Example: The **MOVE** command
- A key icon appears when you have to respond by pressing the Enter or the Return key. 
- Command sequences are indented. The responses are indicated in boldface. The directions are indicated in italics and the comments are enclosed in parentheses. Command: **MOVE**  
Select object: **G**  
Enter group name: *Enter a group name (the group name is group1)*
- The methods of invoking a tool/option from the **Ribbon**, **Menu Bar**, **Quick Access Toolbar**, **Tool Palettes**, **Application menu**, toolbars, Status Bar, and Command prompt are enclosed in a shaded box.
 

|                       |             |
|-----------------------|-------------|
| <b>Ribbon:</b>        | Draw > Line |
| <b>Menu Bar:</b>      | Draw > Line |
| <b>Tool Palettes:</b> | Draw > Line |
| <b>Toolbar:</b>       | Draw > Line |
| <b>Command:</b>       | LINE or L   |

## Naming Conventions Used in the Textbook

### Tool

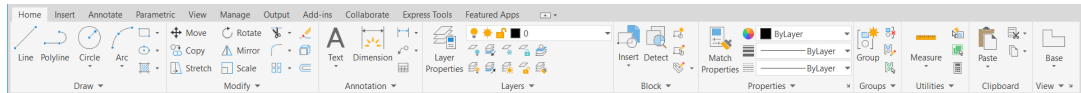

If you click on an item in a toolbar or a panel of the **Ribbon** and a command is invoked to create/edit an object or perform some action, then that item is termed as **tool**, refer to Figure 1.

For example:

**To Create:** **Line** tool, **Circle** tool, **Extrude** tool

**To Edit:** **Fillet** tool, **Array** tool, **Stretch** tool

**Action:** **Zoom** tool, **Move** tool, **Copy** tool

*Figure 1 Various tools in the Ribbon*

If you click on an item in a toolbar or a panel of the **Ribbon** and a dialog box is invoked wherein you can set the properties to create/edit an object, then that item is also termed as **tool**, refer to Figure 1.

For example:

**To Create:** **Define Attributes** tool, **Create** tool, **Insert** tool

**To Edit:** **Edit Attributes** tool, **Block Editor** tool

### Button

If you click on an item in a toolbar or a panel of the **Ribbon** and the display of the corresponding object is toggled on/off, then that item is termed as **Button**. For example, **Grid** button, **Snap** button, **Ortho** button, **Properties** button, **Tool Palettes** button, and so on; refer to Figure 2.

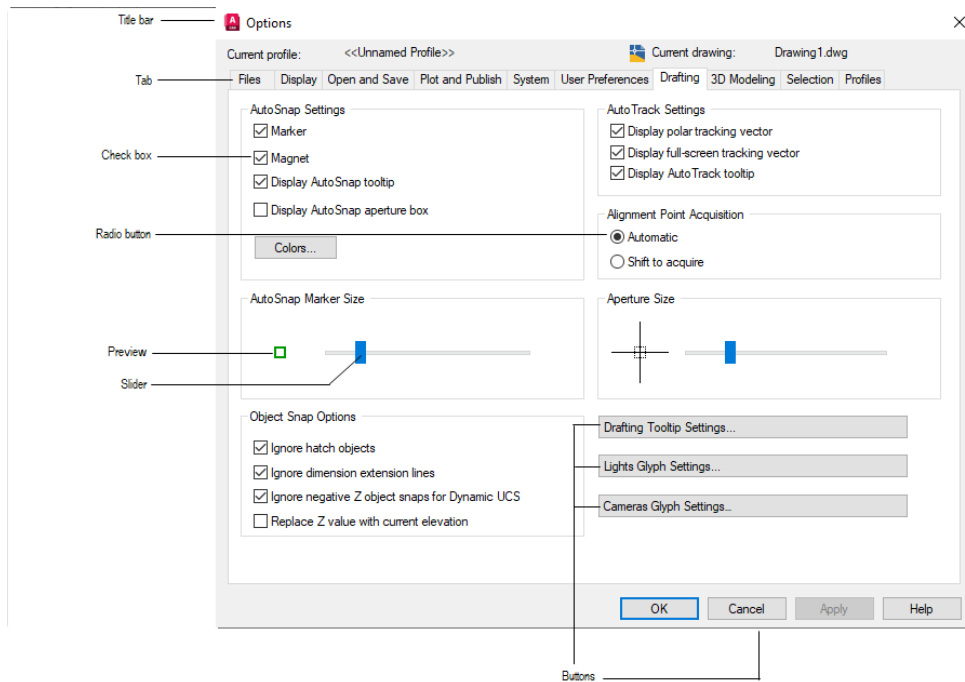

*Figure 2 Various buttons displayed in the Status Bar and Ribbon*

The item in a dialog box that has a 3D shape like a button is also termed as **Button**. For example, **OK** button, **Cancel** button, **Apply** button, and so on.

### Dialog Box

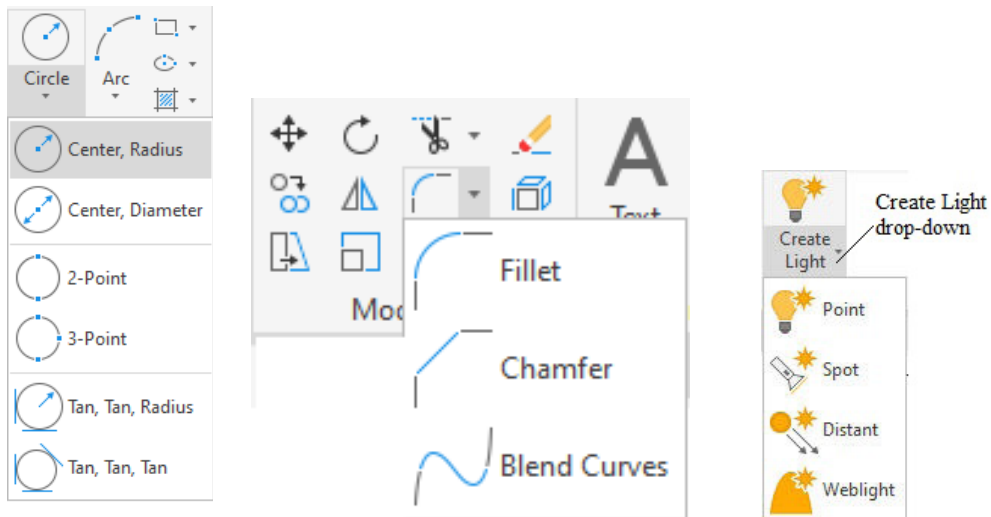

In this textbook, different terms are used for referring to the components of a dialog box. Refer to Figure 3 for the terminology used.

*Figure 3 The components of a dialog box*

## Drop-down

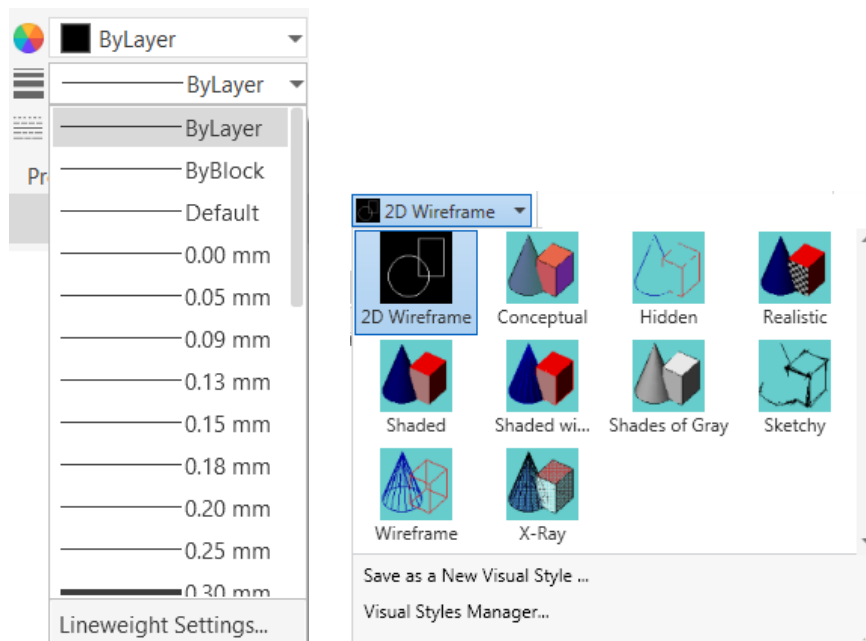

A drop-down is the one in which a set of common tools are grouped together. You can identify a drop-down with a down arrow on it. These drop-downs are given a name based on the tools grouped in them. For example, **Circle** drop-down, **Fillet/Chamfer** drop-down, **Create Light** drop-down, and so on; refer to Figure 4.

*Figure 4 The Circle, Fillet/Chamfer, and Create Light drop-downs*

## Drop-down List

A drop-down list is the one in which a set of options are grouped together. You can set various parameters using these options. You can identify a drop-down list with a down arrow on it. To know the name of a drop-down list, move the cursor over it; its name will be displayed as a tool tip. For example, **Lineweight** drop-down list, **Linetype** drop-down list, **Object Color** drop-down list, **Visual Styles** drop-down list, and so on; refer to Figure 5.

*Figure 5 The Lineweight and Visual Styles drop-down lists*

## Options

Options are the items that are available in shortcut menu, drop-down list, Command prompt, **Properties** panel, and so on. For example, choose the **Properties** option from the shortcut menu displayed on right-clicking in the drawing area, refer to Figure 6.

## Tools and Options in Menu Bar

A menu bar consists of both tools and options. As mentioned earlier, the term **tool** is used to create/edit something or to perform some action. For example, in Figure 7, the item Box has been used to create a box shaped surface, therefore it will be referred to as the **Box** tool.

Similarly, an option in the menu bar is the one that is used to set some parameters. For example, in Figure 7, the item Linetype has been used to set/load the linetype, therefore it will be referred to as an option.

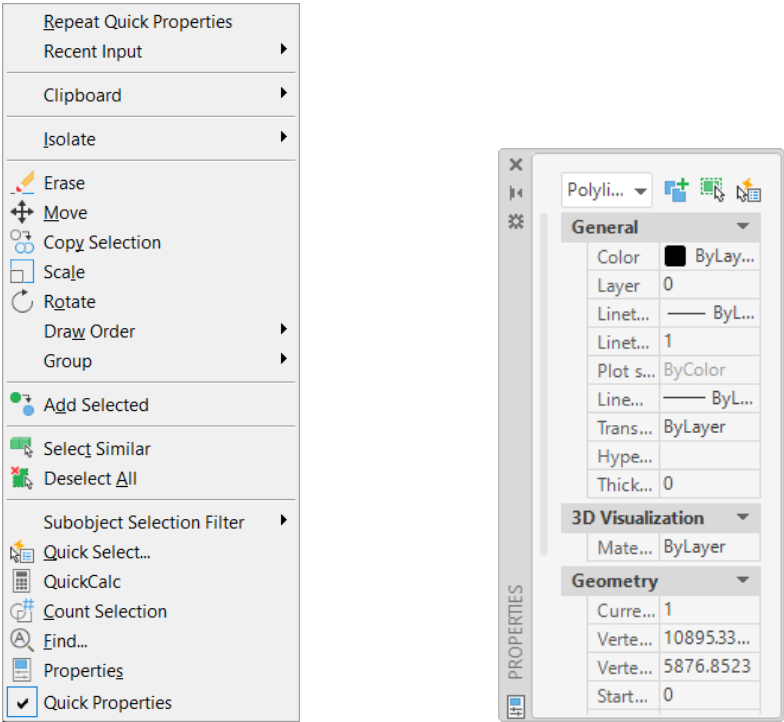

Figure 6 Options in the shortcut menu and the *Properties* palette

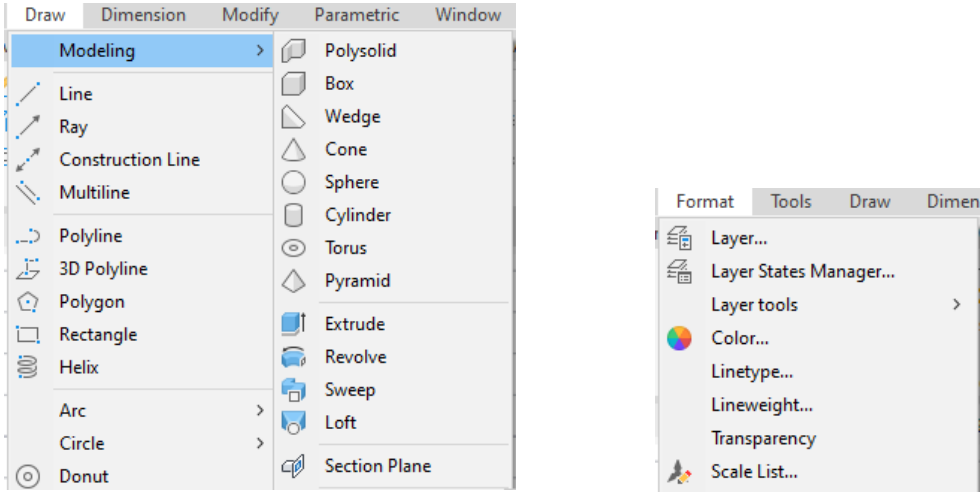

Figure 7 Tools and options in the menu bar

## Free Companion Website

It has been our constant endeavor to provide you the best textbooks and services at affordable price. In this endeavor, we have come out with a Free Companion website that will facilitate the process of teaching and learning of AutoCAD 2027. If you purchase this textbook, you will get access to the files on the Companion website.

The following resources are available for the faculty and students in this website:

### Faculty Resources

- **Technical Support**

The faculty can get online technical support by contacting *techsupport@cadcim.com*.

- **Instructor Guide**

Solutions to all review questions and exercises in the textbook are provided in this guide to help the faculty members test the skills of the students.

- **Part Files**

The part files used in illustrations, examples, and exercises are available for free download.

- **Drawing Files**

The drawing files used in examples and exercises.

- **Free Download Projects**

In this book, two projects are available for free download..

### Student Resources

- **Technical Support**

You can get online technical support by contacting *techsupport@cadcim.com*.

- **Part Files**

The part files used in illustrations and examples are available for free download.

- **Free Download Projects**

In this book, two projects are available for free download..

You can access additional learning resources by visiting *<https://allaboutcadcam.blogspot.com>*.

If you face any problem in accessing these files, please contact the publisher at *sales@cadcim.com* or the author at *stickoo@pnw.edu* or *tickoo525@gmail.com*.

**Tutorial Videos: Link & QR Code**

All examples in this book are available in video format. To get access of the videos, please complete the following one-time registration process:

1. Scan the QR code or visit the following link: <https://www.cadcim.com/adv-autocad-2027-problem-solving-approach-video-examples>
2. Click the **Get Access** button on the page displayed.
3. Complete the registration form and click **Submit**.

4. Once your request is verified, you will receive an email with instructions to set up your course account.
5. Log in to your account and access the video tutorials associated with this book anytime using your login credentials.

**Note:** Video tutorials for free download projects are not available.

**Video Courses**

CADCIM offers video courses in CAD, CAE Simulation, BIM, Civil/GIS, and Animation domains on various e-Learning/Video platforms. For detailed information on the video courses, please visit the CADCIM website using the following link: <https://www.cadcim.com/video-courses>.

**Stay Connected**

You can now stay connected with us through Facebook and Twitter to get the latest information about our textbooks, videos, and teaching/learning resources. To stay informed of such updates, follow us on Facebook ([www.facebook.com/cadcim](http://www.facebook.com/cadcim)) and Twitter ([@cadcimtech](https://twitter.com/cadcimtech)). You can also subscribe to our You Tube channel ([www.youtube.com/cadcimtech](http://www.youtube.com/cadcimtech)) to get the information about our latest video tutorials.
